BY THE NUMBERS

7
books written, built, and published, free to read

338
sections, with 3,457 worked solutions

127,073
math expressions, each with a spoken label

13
years in high school math classrooms

EDUCATION

Master of Mathematics
University of Tennessee, Knoxville, 2020

B.S., Secondary Education (Mathematics)
Minor in Spanish, Kansas State University, 2012

SKILLS

Writing and design: onboarding guides, training manuals and workbooks, how-to guides and help pages, study guides, course textbooks with print and read-aloud editions, slide decks, and answer keys

Build: HTML, CSS, JavaScript, Python, static sites on Cloudflare Pages, Canvas pages, KaTeX math typesetting, accessibility (WCAG AA, spoken math labels), automated checks and deploy gates

Working style: research first, fixed-price quotes by scope, AI-assisted drafting with human verification of every number

SUMMARY

I write training manuals, onboarding guides, how-to guides, and course textbooks that people can follow on the first read, and I build the small web tools and Canvas pages that go with them. Thirteen years in high school math classrooms taught me to plan and write ahead for the student who might get stuck or give up. Every project is quoted at a fixed price and delivered as files the client owns.

SELECTED WORK, LINKED FROM MEGAN-WARREN.COM

Four interactive course textbooks (Trigonometry; Probability and Linear Algebra; Derivatives; Integrals) and three history readers, all free on the web and on Apple Books. Numbered steps, worked examples, hints where readers get stuck, a print menu, and a read-aloud mode. Across the textbooks: 23 games and 116 slide decks.

Canvas unit hubs and prep pages, generated from a course's existing book and slides, with typeset math and "check your answer" boxes.

Ask the Turtle (nonprofit fundraising consultancy): the website, three free fundraising calculators, and Prospect Finder (a private tool that turns a nonprofit's name into a contact spreadsheet sourced from its IRS Form 990 filings).

Hello Paint: a shop that turns a customer's photo into a custom paint-by-number kit, with its 140-asset brand system and the color-matching tool behind it.

Grouper: a free classroom group maker that remembers every pairing, so students keep meeting new partners all term, with roles, a timer, and a projector view.

Wildcard: a free icebreaker spinner with 190 questions from podcast interviews like Hot Ones and SmartLess. The class guesses, then sees what the guest said.

Quality gates: before any book update goes live, a computer re-solves the answers and checks US spelling, layout overlap, and the spoken label on every expression.

EXPERIENCE

Upper School Math Teacher, Beaver Country Day School — 2020 to 2026

Chestnut Hill, MA

- Taught Upper School math and coached student-directed projects in matrix theory and non-Euclidean geometry; advised the same eight students for four years.
- Among the first faculty asked to join the school's AI Working Group, in 2023. The group covered AI policy, faculty training, curriculum, and student learning. Summer 2026 grant for a teacher-directed project on AI resources for student learning.

Private Tutor, independent — 2016 to present

- One-on-one tutoring for students in grade 6 through college: math at every level, plus statistics, physics, chemistry, economics, and standardized test prep.

Upper School Math Teacher, four schools — 2013 to 2020

- Milton Academy, MA (2019 to 2020); Webb School of Knoxville, TN (2017 to 2019: Geometry curriculum map, Technology Committee); Cedar Creek School, LA (2015 to 2017: math and Spanish); Manhattan High School, KS (2013 to 2015: Common Core curricula, mentor to eight student teachers).

Updated November 2026.
